

SAN FRANCISCO PENINSULA RESEARCH & FORECAST REPORT

The Pace Continues

OFFICE OVERVIEW

After a very solid year of marked improvement across the board and absolute frenetic activity in the high demand core locations, the San Francisco Peninsula commercial real estate market kicked off the first quarter of 2014 at a more measured pace.

The vacancy rate for the San Francisco Peninsula has leveled off somewhat after the extraordinary improvements of the past year and currently stands at 9.76 percent. Available square footage is slightly higher than at the close of 2013 after experiencing the first quarter of negative net absorption in a year at negative 109,057 square feet. San Mateo County saw a nominal decrease in the amount of available space with vacancy at 11.28 percent and net absorption at negative 14,561 square feet.

Gross absorption, a measure of all leasing activity in a market area, remained brisk but was down slightly on the San Francisco Peninsula, totaling 1,255,792 square feet for the quarter. While this is slightly below the past two quarter's total, it is within the average range seen in the past two years. San Mateo County's gross absorption total of 779,255 square feet was similarly off from the past few quarter's activity, but well within recent averages.

Rents can be a trailing indicator for the strength of a market, but it is not clear whether the slower growth of asking rates on the San Francisco Peninsula over the past few quarters actually signals a slowdown. The current average asking rate of \$3.90 FS on the San Francisco Peninsula and \$3.54 FS for San Mateo County is the highest since the dot-com days, but the rate of growth has slowed for the San Francisco Peninsula, with two quarters of no rent growth followed by the most recent quarter's 2.0 percent uptick. Given the growing scarcity of available higher-end leasing opportunities, it is not unreasonable to think that rent growth is actually constrained by the market's strength.

Once again, the San Francisco Peninsula was buoyed by the disproportionately strong performance within a few small submarkets, as users continue to demand immediate access to the rail lines. In this quarter, over 50,000 square feet of net absorption was concentrated in the downtown cores of Palo Alto and Redwood City (two relatively small submarkets). This is just a drop in the bucket compared to overall market activity in the region, but a further indicator of just how focused tenant demand remains on these amenity-heavy locations. The vacancy rates in both these downtowns continue to plummet, and the new dynamic of user demand so drastically driven to these locations has become deeply entrenched.

Outside of some of the most active core submarkets, larger transactions were in short supply in the first quarter of 2014. A notable exception was Gilead Science's 109,000 square foot lease in Foster City, the largest office transaction there in five years. Other major transactions of the quarter include Coupa Software's 26,200 square foot San Mateo lease at The Crossroads, and Pure Storage's 22,500 square foot lease in downtown Mountain View.

- 4. San Bruno/Millbrae
- 5. Burlingame
- 6. San Mateo
- 7. Foster City
- 8. Belmont/San Carlos
- 9. Redwood Shores
- 10. Redwood City
- 11. Menlo Park

*Office Overview Continued from P. 1

Even if we are witnessing a bit of a cooling market, at least in the more suburban parts of San Mateo County, the near term prospects look quite solid. The volume of new availabilities coming to market remains low, and sublease space is in very short supply (with the notable exception of downtown Mountain View, where several large blocks of sublease space are currently seeing strong activity). Sublease inventory, in fact, currently comprises less than 15 percent of the total available square footage on the San Francisco Peninsula, an extraordinarily low figure not seen since 2007. We anticipate that the heavily bifurcated market will even out over the course of the next several quarters, with users forced to broaden their search parameters past the deeply oversubscribed core locations.

R&D/INDUSTRIAL OVERVIEW

The start of 2014 continued with a similar velocity to that of our very strong 2013. Both the R&D and industrial markets boasted positive net absorption, which translated into a decrease in vacancy for both sectors. With inventory dissipating, no new construction, and demand still strong, we expect this trend to continue throughout the year.

Every San Mateo County city saw a decrease in vacancy in the R&D market except for the smallest submarket of San Bruno/Burlingame that remained steady at 2.7 percent vacancy and San Mateo/Foster City at 1.7 percent. The overall vacancy for the county dropped from 9.9 percent in the fourth quarter of 2013 to 8.7 percent this quarter, which is the lowest vacancy rate since the third quarter of 2008 when it was 8.5 percent. This drop in availability has spiked rents from \$1.91 NNN last quarter to \$2.08 NNN this quarter. The San Francisco Peninsula only saw 47,689 square feet of net absorption this quarter, however, observed 316,756 square feet of gross absorption. Although additional space has hit the market, consistent deal transactions have kept the R&D market moving forward. At this point last year, vacancy was nearly six percent higher and rents were almost seven percent lower. Overall, significant progress has been made.

*R&D/Industrial Overview Continued on P. 5

*THE SOUTH PENINSULA CITIES OF MOUNTAIN VIEW AND PALO ALTO ARE FOR REFERENCE PURPOSES AS THEY ARE NOT INCLUDED IN THE SAN MATEO COUNTY MARKET TOTALS.

*R&D/Industrial Overview Continued from P. 2

With industrial vacancy rate dropping from 5.65 percent last quarter to 3.98 percent this quarter, availability on the San Francisco Peninsula has hit record lows drawing comparison to the original dot-com boom in the late nineties and early two thousands.

SAN MATEO COUNTY INDUSTRIAL HISTORICAL RENT VS. VACANCY

SAN MATEO COUNTY R&D HISTORICAL RENT VS. VACANCY

The differentiator this cycle is that industrial users are occupying all of the space. The last time the industrial market was this tight via fly by night, tech companies were occupying warehouse space because either they could not find office space to rent or the rates were too high. This time, the wave of activity appears to be more sustainable.

The source of tightening in the industrial market has been high demand and solid deal volume for this quarter with gross absorption of 730,618 square feet and net absorption of 632,820 square feet. This is the highest net absorption since the second quarter of 2007 when it was 698,188 square feet. Oddly enough we saw asking rates drop from \$0.90 NNN last quarter to \$0.84 NNN this quarter. While this does not align with current supply and demand, it can be attributed to several large available blocks of space on the market that have lower asking rates due to economies of scale. However, with a number of large tenants in the market and limited space available, expect these blocks to be leased in a short period of time. This will decrease vacancy further and raise the average asking rate once again.

The pace of transactions for both the R&D and industrial markets remained strong for the first quarter of this year. With demand increasing in both sectors, expect similar statistical market trends for the remainder of this year. In the near future, also anticipate tenants to be pushed to the East and South Bay due to a lack of availability and high rent expenses.
